Nuclear chemistry is the subfield of chemistry dealing with radioactivity, nuclear processes, such as nuclear transmutation, and nuclear properties.. It is the chemistry of radioactive elements such as the actinides, radium and radon together with the chemistry associated with equipment (such as nuclear reactors) which are designed to perform nuclear processes.

In chemistry, a steady state is a situation in which all state variables are constant in spite of ongoing processes that strive to change them. For an entire system to be at steady state, i.e. for all state variables of a system to be constant, there must be a flow through the system (compare mass balance). A simple example of such a system is the case of a bathtub with the tap running but with ...

Steady state (chemistry) - Wikipedia

For simplicity, we consider here only one single ion (and omit the summation). This does not affect the general validity of the procedure. ← P. Atkins and J. de Paula: Physical Chemistry, 8th Edition, W. H. Freeman and Company New York, 2006, Table 21.4, p. 1019 ←

En 1780, Luigi Galvani descubrió que cuando dos metales diferentes (cobre y zinc, por ejemplo) se ponían en contacto y, a continuación, ambos tocaban diferentes partes de un nervio de un anca de rana, hacían que se contrajesen los músculos de dicha extremidad. [3] Llamó a este fenómeno "electricidad animal" y sirvió de modelo para el diseño de la primera pila.

El paso de la etapa de determinación de la velocidad (RDS) a la etapa de limitación de la velocidad (rate-limiting step) en una reacción química. Este paso es el más lento y determina la velocidad global de la reacción.

El paso de la etapa de determinación de la velocidad

En una reacción química, el paso de la etapa de determinación de la velocidad (RDS) es el más lento y determina la velocidad global de la reacción. Este paso es el más lento y determina la velocidad global de la reacción.

La química nuclear

La química nuclear es la rama de la química que tiene que ver con la radiactividad, con los procesos y propiedades nucleares. Es la química de los elementos radiactivos tales como los actínidos, radio y radón junto con la química asociada con el equipo (tales como los reactores nucleares), los cuales son diseñados para llevar a cabo procesos nucleares.
