"If a tree dies, plant another in its place." Scientists today place all life in neat categories with sensible names that do not change. A few hundred years ago, though, scientists gave plants and animals long Latin names and often changed those names at will. Carl Linnaeus changed that when he developed an organized system that is still used today.

What Is Acute Myeloid Leukemia?. Acute myeloid leukemia (AML), also known as acute myelocytic leukemia or acute myelogenous leukemia, is a cancer that begins in cells that normally develop into blood cells. The disease is characterized by the proliferation of immature cells termed "blasts." These blasts eventually overrun the marrow to the detriment of normal cells and the patient dies.
