There are multiple ways to combine or join two arrays in Java, both for primitive like int array and Object e.g. String array. You can even write your own combine() method which can use System.arraycopy() to copy both those array into the third array. But being a Java developer, I first looked in JDK to find any method which concatenates two arrays in Java.

Whenever I analyze data in Excel, I format the spreadsheet to make it easier to read. A little attention to fonts, boxes and shading can help people understand the key data faster. One way to give yourself some flexibility with formatting is to combine text and the results of a formula in a single cell.
