In mathematics, and more specifically in linear algebra and functional analysis, the kernel (also known as null space or nullspace) of a linear map $L : V \rightarrow W$ between two vector spaces V and W , is the set of all elements v of V for which $L(v) = 0$, where 0 denotes the zero vector in W . That is, in set-builder notation, $\text{ker } L = \{v \in V \mid L(v) = 0\}$.

The first four axioms mean that V is an abelian group under addition.. Elements of a vector space may have various nature; for example, they can be sequences, functions, polynomials or matrices. Linear algebra is concerned with properties common to all vector spaces.

Linear Algebra and Its Applications 5th Edition (David C. Lay) Linear Algebra and its Applications publishes articles that contribute new information or new insights to matrix theory and finite dimensional linear algebra in their algebraic, arithmetic, combinatorial, geometric, or numerical aspects.

c. Consider the statement as, "If a system of linear equations has two different solutions, it must have infinitely many solutions." If a linear system has more than one solution, then it is a consistent system and has a free variable.

Geometric algebra is a very convenient representational and computational system for geometry. We firmly believe that it is going to be the way computer science deals with geometrical issues.

At some point a longer list will become a List of Great Mathematicians rather than a List of Greatest Mathematicians. I've expanded my original List of Thirty to an even Hundred, but you may prefer to reduce it to a Top Seventy, Top Sixty, Top Fifty, Top Forty or Top Thirty list, or even Top Twenty, Top Fifteen or Top Ten List.

The 100 Greatest Mathematicians - fabpedigree.com

Many of the mathematical concepts that we use today were once unknown. Had it not been for famous mathematicians and their contributions, some of those concepts may not be around today. Important thinkers throughout history like Archimedes, Pythagoras, and Benjamin Banneker have helped us understand our world through mathematics and numbers.

Mathematical Problems Lecture delivered before the International Congress of Mathematicians at Paris in 1900 By Professor David Hilbert 1. Who of us would not be glad to lift the veil behind which the future lies hidden; to cast a glance at the next advances of our science and at the secrets of its development during future centuries?

To answer your question as it was posed I would have to say, "No, mathematics is not necessary for programming". However, as other people have suggested in this thread, I believe there is a correlation between understanding mathematics and being able to "think algorithmically".

At the beginning of the textbook I used for my graduate stat theory class, the authors (George Casella and Roger Berger) explained in the preface why they chose to write a textbook: "When someone discovers that you are writing a textbook, one or both of two questions will be asked. The first is "Why are you writing a book?" and the second is "How is your book different from what's ...
