Railway electrification in Great Britain began during the late 19th century. A range of voltages has been used, employing both overhead lines and conductor rails; the two most common systems are 25 kV AC using overhead lines and the 750 V DC third rail system used in southeast England and on Merseyrail. In 2006, 40%—3,062 miles (4,928 km) of the British rail network was electrified, and 60% ...

In electrical engineering, the power factor of an AC electrical power system is defined as the ratio of the real power absorbed by the load to the apparent power flowing in the circuit, and is a dimensionless number in the closed interval of  $-1$  to  $1$ . A power factor of less than one indicates the voltage and current are not in phase, reducing the instantaneous product of the two.
