Algebra (from Arabic "al-jabr", literally meaning "reunion of broken parts") is one of the broad parts of mathematics, together with number theory, geometry and analysis. In its most general form, algebra is the study of mathematical symbols and the rules for manipulating these symbols; it is a unifying thread of almost all of mathematics. It includes everything from elementary equation solving ...

1.1 What is Abstract Algebra? 3 which we won't write down here, but it took quite a longtime for mathematicians to find it. The general formula for cubics<sup>4</sup> was discovered in Italy during the Renaissance, by Niccolò Fontana Tartaglia.

The modern concept of an abstract group developed out of several fields of mathematics. The original motivation for group theory was the quest for solutions of polynomial equations of degree higher than 4. The 19th-century French mathematician Évariste Galois, extending prior work of Paolo Ruffini and Joseph-Louis Lagrange, gave a criterion for the solvability of a particular polynomial ...

The "15 puzzle" is a sliding square puzzle commonly (but incorrectly) attributed to Sam Loyd. However, research by Slocum and Sonneveld (2006) has revealed that Sam Loyd did not invent the 15 puzzle and had nothing to do with promoting or popularizing it. The puzzle craze that was created by the 15 puzzle began in January 1880 in the United States and in April in Europe and ended by July 1880.

La economía matemática es la aplicación de métodos matemáticos para representar teorías y analizar problemas en la economía. Por convención, los métodos aplicados se refieren a aquellos que van más allá de geometría simple, como cálculo diferencial e integral, ecuaciones diferenciales, álgebra de matrices, programación matemática y otros métodos computacionales.
