IXL - Write a polynomial from its roots (Algebra 2 practice)

Recall that if you apply synthetic division and the remainder is 0, then c is a zero or root of the polynomial function.. If you need a review on synthetic division, feel free to go to Tutorial 37: Synthetic Division and the Remainder and Factor Theorems.. At this point you are wanting to pick any POSSIBLE rational root form the list of .

The fundamental theorem of algebra states that every non-constant single-variable polynomial with complex coefficients has at least one complex root.This includes polynomials with real coefficients, since every real number is a complex number with an imaginary part equal to zero.. Equivalently (by definition), the theorem states that the field of complex numbers is algebraically closed.

Solution of an equation. Every equation in the unknown x may be rewritten as =by regrouping all terms in the left-hand side. It follows that the solutions of such an equation are exactly the zeros of the function .In other words, "zero of a function" is a phrase denoting a "solution of the equation obtained by equating the function to 0," and the study of zeros of functions is exactly the same ...

Zero of a function - Wikipedia

In this tutorial we will be looking at several aspects dealing with zeros of polynomial functions. If you need a review on how to find zeros, the Rational Zero Theorem or Descartes' Rule of Signs, feel free to go to Tutorial 38: Zeros of Polynomial Functions, Part I. On this page we dive a little deeper into the concept of zeros.

Polynomials are often the product of smaller polynomial factors. Binomial factors are polynomial factors that have exactly two terms. Binomial factors are interesting because binomials are easy to solve, and the roots of the binomial factors are the same as the roots of the polynomial.
