Section 8 Covalent Bonding Guide

This page explains what covalent bonding is. It starts with a simple picture of the single covalent bond, and then modifies it slightly for A'level purposes. It also goes on to a more sophisticated view involving hybridisation. This isn't required by many UK-based syllabuses at this level. However ...

In chemistry, resonance is a way of describing bonding in certain molecules or ions by the combination of several contributing structures (or forms, also variously known as resonance structures or canonical structures) into a resonance hybrid (or hybrid structure) in valence bond theory. It has particular value for describing delocalized electrons within certain molecules or polyatomic ions ...

What is the bonding in sodium chloride? This page describes the formation of an ionic bond by electron transfer, usually from a metal to a non-metal and give detailed annotated dot and cross diagrams of the resulting ionic compounds. ionic bonding i.e. the metal attraction of oppositely charged ions to give ionic bonds and the properties of ionic compounds is described.

Human bonding is the process of development of a close, interpersonal relationship between two or more people. It most commonly takes place between family members or friends, but can also develop among groups, such as sporting teams and whenever people spend time together. Bonding is a mutual, interactive process, and is different from simple liking. It is the process of nurturing social connection.

NATURAL BOND ORBITALS 93 In accordance with the simple bond orbital picture¹⁰ each bonding NBO σ_{AB} can be written in terms of two directed valence hybrids (NHOs) h_A , h_B on atoms A and B, with corresponding polarization coefficients c_A , c_B , $\sigma_{AB} = c_A h_A + c_B h_B$ (4a)

When two atoms form a molecule with a covalent bond, it can create a polar or non-polar molecule. The difference is whether there is an excess charge due to an imbalance of electronegativity.
