Algebra can essentially be considered as doing computations similar to those of arithmetic but with non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra belongs to the theory of equations and is not, nowadays, considered as belonging to algebra (in fact, every proof must use ...

Abstract: Over the last years a number of evidences has been accumulated about high incidence of tandem repeats in proteins carrying fundamental functions and being related to a number of human diseases. Protein repeats are strongly degenerated during evolution and, therefore, cannot be easily identified. We developed a program called T-REKS for ab initio identification of the tandem repeats.
