

## *Zill Solution Differential With Boundary 4th Ed*

### **Zill Solution Differential With Boundary**

A differential equation is a mathematical equation that relates some function with its derivatives. In applications, the functions usually represent physical quantities, the derivatives represent their rates of change, and the differential equation defines a relationship between the two.

### **Differential equation - Wikipedia**

The Dirichlet problem for Laplace's equation consists of finding a solution  $\phi$  on some domain  $D$  such that  $\phi$  on the boundary of  $D$  is equal to some given function. Since the Laplace operator appears in the heat equation, one physical interpretation of this problem is as follows: fix the temperature on the boundary of the domain according to the given specification of the boundary condition.
